

Semester 1 (1st year 1st Semester)

Course Code	Course Title	Credit	Theory	Lab
CSE 1101	Structured Programming	1	1	0

Course Outline: Fundamentals of C programming; Introducing C's Program Control Statements; Data types, Variables and Expressions; Exploring Arrays and Strings; Understanding Pointers and Functions; Console and File I/O; Structures and Unions.

References:

1. Teach Yourself C, Herbert Schildt, McGraw Hill
2. C: The Complete Reference, Herbert Schildt, McGraw Hill
3. Schaum's Outline of programming with C, McGraw Hill

Course Code	Course Title	Credit	Theory	Lab
CSE 1102	Structured Programming Lab	2	0	2

Course Outline: Fundamentals of C programming; Introducing C's Program Control Statements; Data types, Variables and Expressions; Exploring Arrays and Strings; Understanding Pointers and Functions; Console and File I/O; Structures and Unions.

References:

1. Teach Yourself C, Herbert Schildt, McGraw Hill
2. C: The Complete Reference, Herbert Schildt, McGraw Hill
3. Schaum's Outline of programming with C, McGraw Hill

Course Code	Course Title	Credit	Theory	Lab
CSE 1103	Discrete Mathematics	3	3	0

Course Outline: The Foundations: Logic and Proofs: propositional logic, applications of propositional logic, propositional equivalences, predicates and quantifiers, nested quantifiers, rules of inference, introduction to proofs; **Basic Structures:** Sets, Functions, Sequences, Sums, and Matrices; **Number Theory:** The division algorithm, divisibility and the euclidean algorithm, prime numbers, congruence, applications of congruence; **Induction and Recursion:** Mathematical Induction, Recursive Definitions and Structural Induction, Program Correctness; **Counting:** The addition and multiplication rules, The principle of Inclusion-Exclusion, The pigeon-hole principle, permutations,

combinations, Generalized Permutations and Combinations, Generating Permutations and Combinations; **Relations and Functions:** Symmetry, transitivity, reflexivity, equivalence classes, congruence, closure of relations, partial orderings; **Graphs:** Graphs and Graph Models, Graph Terminology and Special Types of Graphs, Representing Graphs and Graph Isomorphism, Connectivity, Euler and Hamilton Paths; **Trees:** Introduction to Trees, Tree Traversal, Spanning Trees.

References:

1. Discrete Mathematics and its Applications, Seventh Edition by Kenneth H. Rosen.

Course Code	Course Title	Credit	Theory	Lab
STAT 1105	Probability and Statistics for Engineers-I	3	3	0

Course Outline: Introduction to Statistics: Concept of Data and Variables, Data Collection and Descriptive Statistics, Inferential Statistics, Populations and Samples; **Descriptive Statistics:** Frequency Tables and Graphs, Relative Frequency Tables and Graphs, Grouped Data, Histograms, Ogives, Stem and Leaf Plots, Sample Mean, Sample Median, Sample Mode, Sample Variance and Standard Deviation, Sample Percentiles and Box Plots, Chebyshev's Inequality, Normal Data Sets, Paired Data Set and Sample Correlation Coefficient; **Elements of Probability:** Basic Terminology in Probability, Sample Space and Events, Venn Diagrams and Algebra of Events, Axioms of Probability, Conditional Probability, Bayes' Theorem and Independent Events; **Random Variables and Expectation:** Random Variables, Types of Random Variables, Jointly Distributed Random Variables, Expectation, Property of Expected Values, Use of Expected Values in Decision Making, Variance, Covariance and Variance of Sums of Random Variables and Moment Generating Functions; **Special Random Variables:** Binomial Random Variables, Poisson Random Variables, Uniform Random Variables, Normal Random Variables, Exponential Variables, Gamma Distribution, Chi-Square Distribution, t-Distribution and F-Distribution; **Distributions of Sampling Statistics:** Central Limit Theorem, Sampling Distribution for Normal Population, and Sampling from a Finite Population; **Parameter Estimation:** Maximum Likelihood Estimators, Interval Estimates, Estimating the difference in Means of Two Normal Population, Approximate Confidence Interval for the Mean, Confidence Interval of the Mean of the Exponential Distribution and Bayes' Estimator.

References:

1. Sheldon M. Ross, Introduction to Probability and Statistics for Engineers and Scientists, Elsevier/Academic Press, 3rd Ed.
2. M. Nurul Islam, An Introduction to Statistics and Probability, Book World, 3rd Edition.
3. Lipschutz, Lipschutz Seymour, 2000 Solved Problems in Discrete Mathematics, McGraw-Hill, 1st Ed

Course Code	Course Title	Credit	Theory	Lab
MATH 1107	Calculus and Analytical Geometry	3	3	0

Course Outline: Basic Concepts: Real Numbers and Real Lines, Polar Coordinates, Parametric Equations, Functions, Algebra of Functions, Inverse Functions, Quadratic Functions, Shifting Graphs, Trigonometric Functions, Complex Numbers, Inequalities, Infinite Series and Sequences, Taylor

Series, Rate of Change and Limit, Rules of Finding Limits, Formal Definition of Limit, Extension of the Limit Concepts, L'Hospitals Rule, Continuity, Tangent Lines; **Differential Calculus:** The Derivatives of a Function, Differentiation Rules, Rates of Change, Derivatives of Trigonometric Functions, Chain Rule Differentiation, Implicit Differentiation and Rational Exponents, Related Rates of Change, Extreme Values of Functions, Mean Value Theorem, First Derivative and Second Derivative Tests for Extreme Values, Optimization, Linearization and Differentials and Newton's Method; **Integral Calculus:** Indefinite Integrals, Integration by Substitution, Riemann Sums, Definite Integral, Fundamental Theorem of Calculus, Mean Value Theorem, Substitution in Definite Integrals, Areas between Curves, Finding Volumes by Slicing, Volumes of Solids of Revolution, Cylindrical Shells, Lengths of Plane Curves, Areas of Surfaces of Revolution, Moments and Center of Mass, Fluid Pressures and Forces, Integration by Parts, Improper Integrals, Multiple Integrals and Line Integrals; **Linear Algebra and Vector Calculus:** Matrices, Operation on Matrices, Inverse of a Matrix, Rank of Matrix, Determinant, Vectors, and Solutions of System of Linear Equations, and Eigen value Problems.

2. Erwin Kreyszig, *Advanced Engineering Mathematics*, John Wiley & Sons, 9th Ed.

Course Code	Course Title	Credit	Theory	Lab
GE 1109	Soft Skill Communication	3	3	0

Course Outline: The elements of Communication: The importance of communication through English at the present time, The process of communication and factors that influence communication sender, receiver, channel, code, topic, message, context, feedback, noise, filters & barriers, The importance of audience and purpose, The information gap principle: given and new information, information overload, Verbal and non-verbal communication: body language, Comparing general communication and business communication, the sounds of English, Review of English grammar.

References:

1. An introduction to Professional English and Soft Skills by B. K. Das et al., Cambridge University Press .
2. Technical Communication: Principles and Practice, Second Edition by Meenakshi Raman and Sangeeta Sharma, Oxford Publications.
3. Effective Technical Communication by M Ashraf Rizvi, The McGraw-Hill companies.
4. Understanding Body Language by Alan Pease.
5. Communicative Grammar of English by Geoffrey Leech and Ian Svartik.
6. Better English Pronunciation by J.D.O'Connor.
7. English Grammar by S.PitCorder
8. English Grammar by Wren and Martin. This is not the end of the list other books may also be referred.

Course Code	Course Title	Credit	Theory	Lab
GE 1111	Technology and Society	2	2	0

Course Outline: Technology and Society: Nature of technology, social forces that affect its adoption; impact on society, innovation, within historical and contemporary contexts, the societal implications of technology, Effects of technological factors on social life and Influence of Technology on Social Institution, public policy implications of innovation, changing nature of technology and its impact on society.

References:

1. Society and Technological Change. 6th edition. Worth Publishers Inc.

Course Code	Course Title	Credit	Theory	Lab
GE 1112	Technology and Society Lab	1	0	1

Course Outline: Technology and Society: Nature of technology, social forces that affect its adoption; impact on society, innovation, within historical and contemporary contexts, the societal implications of technology, Effects of technological factors on social life and Influence of Technology on Social Institution, public policy implications of innovation, changing nature of technology and its impact on society.

Course Code	Course Title	Credit	Theory	Lab
SE 1113	Introduction to Software Engineering	3	3	0

Course Outline: Introduction to Computers, Basic Computer Organization, Processor and Memory, Secondary Storage Devices, Input-Output Devices, Computer Software, Software and Software Engineering and Software Process Models.

References:

1. Computer Fundamentals, Pradip K Sinha, BPB Publications.
2. Software Engineering: A Practitioner's Approach, 7th Edition, McGraw Hill Higher Education

Semester 2 (1st year 2nd Semester)

Course Code	Course Title	Credit	Theory	Lab
CSE 1201	Data Structure	1	1	0

Outline: Introduction - Data Structures and Complexity of Algorithms, Time Space Tradeoff, Searching Techniques: Linear and Binary Searching; Sorting and Recursion - Discussion of Common Sorting Techniques: Insertion Sort, Selection Sort, Bubble Sort, Quick Sort, Merge Sort, Radix Sort; Factorial and Tower of Hanoi Problem; Linked Lists - Abstract Data Types, List ADTs, and Linked Lists: Singly, Two Way and Circular Linked Lists; Stacks and Queues - Stacks and Queues and their Implementation Strategies; Prefix, Infix and Postfix Expressions, their Transformation and Evaluation Algorithms; Hashing - Hash Indices and Hash Functions, Static and Dynamic Hashing, Collisions in Hash Indices and Collision Resolving Techniques; Trees - Tree Concepts, Binary Tree, BST, Heaps, Heap Sort, Huffman Encoding Technique, AVL Tree, B Tree and B+ Tree; Graphs - Graph Terminologies, Representing Graphs, Graph Searching: BFS and DFS, Shortest Path Problems, Minimum Spanning Tree, Minimum Spanning Tree Algorithms, and Topological Sorting; Problem Solving Strategy - Greedy Algorithms, Divide and Conquer Strategy, Dynamic Programming and Backtracking.

References:

1. *Data Structures*. Schaum's Outline Series.
2. E. Horowitz and S. Sahni, *Fundamentals of Data Structures*, London Pitman.
3. Robert L. Kruse, *Data Structures and Program Design*, Prentice Hall, 2nd Ed.

Course Code	Course Title	Credit	Theory	Lab
CSE 1202	Data Structure Lab	2	0	2

Course Code	Course Title	Credit	Theory	Lab
CSE 1203	Computer Organization	2	2	0

Outline: Introduction: Function and structure of a computer, Functional components of a computer, Interconnection of components, Performance of a computer; **Number representation and arithmetic:**

Binary, octal, and hexadecimal numbers, One's and two's complements and other representations,

Addition and subtraction; **Digital logic and integrated circuits:** Boolean algebra and truth tables, Boolean functions (Gates, Functions, Simplification), Integrated circuits (Combinational circuits - adders, shifters, decoders, multiplexers and ROM's; Flip-flops; Sequential circuits - registers, counters and RAM); **Representation of Instructions:** Machine instructions, Operands, Addressing modes, Instruction formats, Instruction sets, Instruction set architectures - CISC and RISC architectures; **Introduction to Assembly Language:** Programming with Assembly language, The assembly process, Linking and loading, Register-level debugging, **Processing Unit:** Organization of a processor - Registers, ALU and Control unit, Data path in a CPU, Instruction cycle, Organization of a control unit - Operations of a control unit, Hardwired control unit, Micro-programmed control unit; **Memory Subsystem:** Semiconductor memories, Memory cells - SRAM and DRAM cells, Internal Organization of a memory chip, Organization of a memory unit, Error correction memories, Interleaved memories, Cache memory unit - Concept of cache memory, Mapping methods, Organization of a cache memory unit, Fetch and write mechanisms, Memory management unit - Concept of virtual memory, Address translation, Hardware support for memory management; **Input/Output Subsystem:** Access of I/O devices, I/O ports, I/O control mechanisms - Program controlled I/O, Interrupt controlled I/O, and DMA controlled I/O, I/O interfaces - Serial port, Parallel port, PCI bus, SCSI bus, USB bus, Firewall and InfiniBand, I/O peripherals - Input devices, Output devices, Secondary storage devices; **Multiprocessing Systems:** Shared memory multiprocessor, Message-passing multiprocessor, Hardware multithreading

Course Code	Course Title	Credit	Theory	Lab
STAT 1205	Probability and Statistics for Engineers-II	3	3	0

Course Outline: Hypothesis Testing: Tests Concerning the Mean of a Normal Population, Testing the Equality of Means of Two Normal Populations, Hypothesis Tests Concerning the Variance of a Normal Population, Hypothesis Tests in Bernoulli Populations and Tests Concerning the Mean of a Poisson Distribution. Regression and Correlation Analysis: Least Squares Estimators of the Regression Parameters, Distribution of the Estimators, Statistical Inference about the Regression Parameters, Coefficient of Determination and Sample Correlation Coefficient, Analysis of Residuals, Transforming to Linearity, Weighted Least Squares, Polynomial Regression, Multiple Linear Regression, Logistic Regression Models for Binary Output Data and Correlation Analysis. Analysis of Variance: One-way Analysis of Variance, Two-Factor Analysis of Variance: Introduction and Parameter Estimation, Testing Hypotheses and Two-way Analysis of Variance with Interaction Problems. Goodness of Fit Tests and Categorical Data Analysis: Goodness of Fit Tests when All Parameters are Specified, Goodness of Fit Tests when All Parameters are Unspecified, Tests of Independence in Contingency Tables, Tests of Independence in Contingency Tables Having Fixed Marginal Totals and Kolmogorov-Smirnov Goodness of Fit Test for Continuous Data. Nonparametric Hypothesis Tests: Sign Test, Signed Ranked Test, Two-Sample Problem and Runs Tests for Randomness. Quality Control: Control Charts for Average Values, The X-Control Chart, S-Control Charts, and Control Charts for the Fraction Defective, Control Charts for Number of Defects and Other Control Charts for Detecting Changes in the Population Mean.

Course Code	Course Title	Credit	Theory	Lab
MATH 1207	Ordinary Differential Equations	3	3	0

Course Outline: Differential Equations and Mathematical Modeling, Initial Value Problem, Separable Differential Equations, Exact Differential Equations, Linear Differential Equations, Bernoulli Equation, Homogeneous Linear Equations of Second Order, Second Order Homogeneous Equations with Constant Coefficients, Euler-Cauchy Equation, Existence and Uniqueness Theory, Non-homogeneous Equations, Solution by Undetermined Coefficients, Solution by Variation of Parameters, Higher-Order Linear Differential Equations, Higher-Order Homogeneous Equations with Constant Coefficients, and Higher-Order Non-homogeneous Equations.

ations, Vectors, Matrices, and Eigenvalues, Homogeneous Systems with Constant Coefficients, Critical Points, Criteria for Critical Points, Stability, Qualitative Methods for Nonlinear Systems, Non-homogenous Linear Systems, Laplace Transform, Inverse Transform, Transforms of Derivatives and Integrals, Differentiation and Integration of Transforms, Convolution, and Partial Fractions, System of Differential Equations.

Course Code	Course Title	Credit	Theory	Lab
GE 1209	History of Emergence of Bangladesh	3	3	0

Course Outline:

Partition of Bengal in 1905, Devoid of Partition in 1911 and its Reactions.

Partition of the Sub-Continent 1947, Structure of Pakistan, Disparity, the Language Movement and the Rule of Ayub-Yahia Khan (1958-1971).

- a. Lahore Resolution, 1940
- b. The creation of Pakistan 1947
- c. Central and Provincial Structure
- d. Economic, Social and Cultural Disparity
- e. Misrule of Pakistan and Struggle for Democratic Politics
- f. The Language Movement : Context and Phases
- g. United Front of Haque-Vasani-Suhrawardi : Election of 1954 and its Consequences
- h. Ayub Khan's Rise to Power and Characteristics of His Rule (Political Repression, Basic Democracy, Islamisation)
- i. Ayub Khan and Yahia Khan's Rule, Abolition of One Unit, Universal Suffrage, LFO

Rise of Nationalism and the Movement for Self- Determination.

- a. The Six Point Movement of Sheikh Mujibur Rahman
- b. Reactions, Importance and Significance of the Six Point Movement
- c. The Agartala Case, 1968
- d. Students' 11-Points Movement
- e. The Mass-Upsurge of 1969

Election of 1970, Non-cooperation Movement of March 1971 and the Declaration of Independence by Bangabandhu.

- a. Election Result and Central's Refusal to Comply
- b. The Non-cooperation Movement, the 7th March Address, Operation Searchlight

- c. Declaration of Independence by Bangabandhu and His Arrest
 d. The Proclamation of Independence and the Formation of Bangladesh Government

Course Code	Course Title	Credit	Theory	Lab
SE 1213	Object Oriented Concepts I	2	2	0

Course Outline: Object Oriented Concepts - Introduction to Object Oriented Concepts – Procedural vs Object Oriented (OO) Programming, What is an Object – Object Data and Behavior, What is a Class

– Attributes, Methods and Messages, Using UML to model a Class Diagram, Encapsulation and Data Hiding: Interfaces and Implementations, Inheritance: Super classes and Subclasses, Abstraction and Is-a Relationships; Polymorphism, Composition: Abstraction and Has-a Relationships; How to think in terms of Objects – Interface vs Implementation, Abstract thinking when designing Interfaces and Giving the user minimal Interface possible; Object Oriented concepts in details – Constructors: Default constructor, When is a constructor called, Using multiple constructors and The design of constructors, Error handling and The concept of scope; The Anatomy of a Class – The Name, Comments, Attributes, Constructors, Accessors, Public Interface methods and Private implementation methods; Class Design Guidelines – Modeling Real World Systems, Identifying Public Interfaces, Designing Robust Constructors, Designing Error Handling to a Class, Documenting a Class and Using Comments, Designing with Reuse, Extensibility, Maintainability in Mind and Using Object Persistence; Designing with Objects – Proper Analysis, Statement of Work, Requirements Collection, Prototype of User Interface, Identifying the Classes, Determining the responsibilities of Each Class, Class Collaboration, Class Model to Describe the System; Mastering Inheritance – Reusing Objects, Generalization and Specialization, How Inheritance weakens Encapsulation; Frameworks and Reuse – When should we Reuse, Frameworks, Contract: Abstract Classes and Interfaces.

Programming lessons - Introduction to Java – Java Virtual Machine (JVM) and Java Runtime (JRE), Java Development Kit (JDK), Integrated Development Environment (IDE) for Java, Java installation, Hello World! Program, compiling and running Java program, using Java classpath and JVM Architecture; Java syntax – Package, Import, Class, Fields, Methods, Constructors, Primitive data types, Strings and literal, Wrapper class, Nonexistence type: null. Object Oriented Programming (OOP) - The students will implement each of the object oriented concepts which are discussed in the class. Java features to support practical OOP – String Operations: String creations and operations, immutability property of String, String comparison and searching, String buffers and builders; Java I/O: Streams, Input and Output Stream, File, Path, Directory

and tree; Exception handling: try and catch, checked exception vs unchecked exceptions, throw and throws, Common exception and User defined exceptions; Logger and Debugging: Logger, Log levels, Formatters and Filters, Logger Handlers and Manager, Configuration, Introduction to Debugging and Debugging Workflow.

References:

1. The Object Oriented Thought Process, Matt Weisfeld, Addison-Wesley
2. Java How to Program, Paul Deitel and Harvey Deitel, McGraw Hill
3. Java: The Complete Reference, Herbert Schildt, McGraw Hill
